COLLARD defoliators are present in vineyards all over the world, the COLLARD Company now utilises this experience in Orchards.

### LISTENING

We make your requirements your machine.

## COLLARD® LEAF REMOVER WITH DOUBLE FLOW\* OF AIR

**ELLIPSE-MULTIROTOR®**

Leaf removal is achieved by a double flow\* of low pressure air, produced by a booster, which is blown through the leaves at fruit level by rotating nozzles, that removes the leaves from both the outside and the interior of the row, achieving selective leaf removal around the fruits.

\*COLLARD® Patent

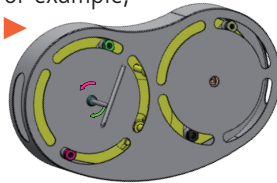

# AN ADVANCED TECHNOLOGY

▲ The orientation of the heads increases or decreases the removal intensity. A multitude of possible combinations to adjust your working height.

## L'ELLIPSE-MULTIROTOR® COLLARD®

It is equipped with a system for selecting the air nozzle\* According to the desired removal intensity. For example, to go from Ø 13 to Ø 14 or Ø 14 to Ø 15, ... ▶

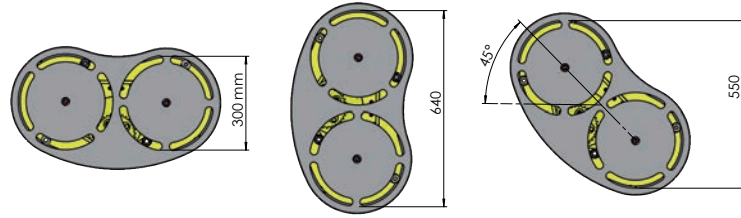

High performance booster unit specially designed for our COLLARD range of Leaf Removers. ▼

## ◀ L'ELLIPSE-MULTIROTOR® COLLARD®

It is compact to « slip » in the vegetation. Its rotary joint\* air distribution system is highly efficient and facilitates the orientation of the heads.

Control and adjustment of the speed rotation of the air distributors. ▼

Available in version 1 to 4 heads with the corresponding booster. ▼

Reinforced lifting frame with adjustment in width, height and tilt by hydraulic cylinders. ▼
