

OenoPur®

Powdered product for preventative must treatment, directly dosable

Product description

OenoPur® is a powdered product for preventative must treatment. OenoPur®, which consists of high purity cellulose, PVPP, gelatine and a mineral adsorber, is easily dispersible and can be used directly. OenoPur® ensures good sedimentation of the precipitate and creates the conditions for best possible separation of the deposit.

OenoPur® removes excess polyphenols and those that have a negative impact on wine before fermentation. Depending on the technical requirements, OenoPur® can be used in juice or mash. This makes it possible to prevent an intrusive bitterness and astringency in the wine. OenoPur® is casein free and is not subject to labelling requirements.

Permitted according to EU Commission Regulation no. 934/2019. User must check compliance with national regulations.

Laboratory tested for purity and quality.

Dosage and use

Intended purpose	Dosage
Precautionary in grapes with little mechanical stress, improvement of juice clarification	30 - 40 g/100 kg mash
Grapes with more mechanical stress, partly unripe grapes, hail-damaged grapes	40 - 100 g/100 kg mash
Optimisation of juice clarification, removal of phenolic notes	40 - 60 g/100 L juice

OenoPur® is added direct to the juice or mash without prior slaking. Ensure that it is thoroughly distributed by stirring well. Wait at least 20 minutes before possibly adding other treatment agents or carrying out filtration. To save time, filtration or centrifuging can also be carried out before sedimentation.

Storage

Store in a cool, dry place away from odours.
