

DEVEX EVAPORATION PLANTS

DEVEX EVAPORATION PLANTS

DEVEX designs, builds and sells complete production lines: Our key technologies are Extraction Plants for the recovery of extracts, Evaporation Plants for the extract concentration and Vacuum Belt Dryers for the production of granulates or powders.

Evaporation Plants can be operated individually. However, most often they are integrated in the extraction and

vacuum drying process.

DEVEX Process & Product Development is pleased to assist you with the evaporation process and all variations. In our company own test center with a pilot extraction and evaporation plant, we are able to do product development with and for you, doing trials with your desired material and parameters, and after that scale this processes up to tailor made production equipment. Send us an inquiry to get to know more of all the opportunities
