

GRANUCOL BI, 500 G

Bruttopreis:
48 €

Nettopreis:
39 €

Granucol products are made of activated carbon pellets of plant origin. The carbon pellets undergo a special production process that ensures high adsorbency properties and easy dissolution before use.

Granucol GE: for adsorption of undesired off-taste and off-smell in beer, juice, wine and spirits

Granucol FA: for reduction of tannins and polyphenols and for the elimination of high-colour due to browning reactions. It can be used on wine, juice and spirits.

Granucol BI: for reduction of tannins and polyphenols and the decolourisation of beer and high colour wines.

Dosage

Granucol GEWine: 10-100 g/hL Juice: 10-100 g/hL Beer: 10-30 g/hL Spirits: 50-100 g/hL Granucol FAWine: 10-30 g/hL Juice: 10-100 g/hL Spirits: 50-100 g/hL Granucol BIWine: 10-50 g/hL Beer: 200-400 g/hL Please note that bench trials are recommended to determine the exact dose of activated carbon required.

Usage Granucol shall be dissolved before use. The dosage of Granucol can be during a precoat filtration or in advance of a fining.

Spirits shall be treated in drinking strength (up to 55% by volume). Bench trials are recommended.

Storage Activated carbon is very sensitive to odour and moisture. Granucol must be protected from moisture and foreign odours. Reseal opened packagings immediately tightly.
