

GRAPE RECEIVING HOPPER WITH VIBRATING DISCHARGE

GRAPE RECEIPT TANKS WITH VIBRATING DISPENSE

Hoppers (tanks) for receiving grapes are an important element in the reception phase and at the beginning of grape processing. All models have a solid frame and are made of AISI 304 stainless steel to ensure the highest quality construction and long-term durability.

The tank allows direct feeding of sorting tables, belt elevators or, with a small difference in height, a destemmer.
