

PNEUMATIC SEED DRILL

The pneumatic seed drill offers many advantages. The electrically controlled seed shaft transports the seed from the container into the air channel. Here the seed is conveyed with the aid of the blower via flexible hoses to the baffle plates and distributed evenly and close to the ground. This ensures exact seed application even in windy conditions!

The pneumatic seeder is designed for soil cultivation (opening the soil) in the inter-row and simultaneous sowing of catch crops. Control of the seeding rate per 1 ha. The seeder is mounted on a solid Hexagon frame, equipped with goose feet, a string roller and a compressed air compressor. 12V power supply. Mounting at the rear of the tractor, CAT 1. The Hexagon frame is adapted to carry many other agricultural equipment by Clemens. Grain tank capacity: 120 liters.
